## ***Zika: Preconception & Perinatal Recommendations for Health Care Providers***

Monday, September 12, 11am

Keck School of Medicine of University of Southern California, Los Angeles, CA

Registration Link: <http://tinyurl.com/Zika2016>

---

### **General Overview**

Information and guidance for reporting and management of Zika-affected patients is rapidly evolving, but despite efforts to convey this critical information, many health providers are unclear on how to manage or prevent Zika infection. The Centers for Disease Control and Prevention (CDC) recommends even before a local outbreak occurs, as part of preparedness for areas that have Aedes mosquitos, health departments should increase “access to and use of effective contraception.” Given that Los Angeles County has been identified by the CDC as one of seven jurisdictions nationally with the greatest risk of local Zika transmission, taking preventative measures is imperative. The goal of this event is to promote the Los Angeles County/California/CDC preconception and perinatal Zika recommendations for testing, patient counseling and management.

Participants will:

- Review the epidemiology and implication of Zika virus infection
- Learn to diagnose and report Zika virus infection
- Review preconception health recommendations to prevent Zika during pregnancy
- Review pregnancy management and follow-up of infants born to infected mothers
- Receive hands-on training for LARC (Long-Acting Reversible Contraception) placement

---

**Agenda**

11:00 Zika Preconception/Perinatal Diagnosing, Reporting & Counseling

12:30 Lunch Break

1:30 to 3:30: LARC (Choice of IUD or Implant) Hands-on Training\*
